

PVD Wheel Care

Your "PVD" coated wheels will provide many years of durable service. Like any quality product you purchase certain guidelines need to be followed for cleaning and maintenance. Please follow these guidelines to ensure your PVD Chrome wheels will provide years good looks.

- ✓ PVD wheels have a clear-coat finish that requires some precautions during cleaning.
- ✓ Do not use any type of chrome cleaner on your wheels. Chrome cleaners contain very harsh acids that can cause the clear-coat to peel. The use of these chrome cleaners will void your warranty.
- ✓ We recommend the use of a soft cloth, soft sponge or a micro-fiber cloth.
- ✓ We recommend Eagle One PVD wheel cleaner. Its pH-neutral formula removes dirt, grime and brake dust, without damaging the clear-coat.
- ✓ Always clean the wheels when they are cool and avoid any type of high pressure washing.
- ✓ It is recommended to apply a high quality wax after your wheels are cleaned, to protect the finish.
- ✓ Minor scratches can be easily polished out with a good quality scratch remover. We recommend Eagle One Premium Wheel Polish or Meguiar's Scratch X2.0.
